

ActivePayment Professional

Payment gateway system for Ingenico OCV Server

Desktop payment processing for online and batch transactions

ActivePayment Professional is a payment gateway system for individual merchants or Internet payment gateways using the Ingenico OCV Server. It supports multiple credit cards; multiple currencies; and multiple Ingenico OCV payment servers, connecting to one or more acquirers.

Ingenico OCV Server is a fast, simple and flexible credit card payment solution for mail order, telephone order and Internet merchants. The Ingenico OCV is a hardware/software solution that provides client applications with a direct connection to an acquiring bank for the processing of credit card based transactions.

ActivePayment Professional provides full reporting and graphical analysis of all transactions passing through the OCV Server. This includes realtime credit card payments made at merchant websites and manual payments such as purchases originating from mail or telephone orders. ActivePayment Professional also provides multi-role access for system administrators, business administrators, helpdesk staff and a complete merchant self-management interface.

ActivePayment Professional utilizes MS Access, SQL Server or Oracle for transaction storage, works on any windows platform, is easy to install and simple to administer through its intuitive web-based interface. Contact us today to obtain your personal desktop payment processing solution.

FEATURES

- Multiple payment channel management
- Multiple merchant management
- Multiple OCV Server management
- Simple integration with OCV Server
- No impact on existing software interfaces
- Compatible with any Windows platform
- Verified by Visa compliant
- MS Access and ODBC database support
- Bank grade security and encryption

CREDIT CARD PROCESSING THROUGH MULTIPLE CHANNELS

ActivePayment Professional accepts payment requests from other software applications such as websites, POS, IVR, ERP or billing systems. It routes these requests to the appropriate Ingenico OCV Server to handle authorization processing with acquirers. Following a response from the OCV Server, ActivePayment Professional transfers control back to the requesting application. ActivePayment Professional also provides the ability for staff, such as call centre staff, to manually enter payments, pre-authorizations and completions. This provides an opportunity for ActivePayment Professional to provide a consolidated view of a merchant's transaction processing.

COMPREHENSIVE MANAGEMENT AND REPORTING

ActivePayment Professional provides full administration capability in a web interface for either single or multiple merchants. This includes transaction searching, graphical analysis of peak transaction periods and customized reports. Naturally, these transaction reports can be exported in MS Excel format for reconciliation purposes and imported into other applications for customized reporting. ActivePayment Professional also allows the provision of managed payment services to other merchants who do not have an existing channel for realtime credit card processing.

VERIFIED BY VISA AND INGENICO OCV COMPLIANT

ActivePayment Professional is a fully compliant solution for Verified by Visa certified by Visa International. It can be provided to all online merchants that use the OCV Server and does not impact the existing OCV Server software.

GUARANTEED SECURITY AND TRANSACTIONAL INTEGRITY

ActivePayment Professional is a bank grade security application. It uses Triple DES encryption in addition to full strength SSL for transactional integrity. It also uses server-side session management, which creates unique keys for every connection to the payment gateway. All sensitive data is encrypted prior to data storage in database tables, which reduces the risk of internal fraud. ActivePayment Professional also provides multi-role access for system administrators, business administrators and helpdesk staff.

SIMPLE INTEGRATION WITH EXISTING SOFTWARE SYSTEMS CONNECTING TO OCV SERVERS

ActivePayment Professional is designed as a filter between a merchant's existing applications and the OCV Server system. No changes are needed to the existing software that currently connects to the OCV Server. New applications utilize a software module designed to connect directly to ActivePayment Professional over any Internet connection for payment processing.

INTUITIVE WEB-BASED ADMINISTRATION INTERFACE

ActivePayment Professional provides users with an easy to use, web-based interface. ActivePayment Professional can be administered directly from the merchant's system or remotely via an external web browser. All configuration and management of ActivePayment Professional is performed using the simple administration interface, requiring no coding or code level changes.

EASY INSTALLATION

ActivePayment Professional has minimal hardware requirements allowing it to co-exist with your existing OCV applications. It works on Windows 95, 98, NT, 2000 operating systems and supports MS Access, Microsoft SQL Server or Oracle for data storage. ActivePayment Professional comes with a simple installer and a wizard to assist you in setting up and testing connection to your OCV Server(s).
